TAS VMware Scope TCO Analysis

Think you can benefit from server virtualisation but not sure how? Need a helping hand to determine TCO (Total Cost of Ownership) for a virtualisation business case?

TAS is experienced in performing virtualisation TCO and virtualisation scope reviews for companies of all sizes. Let us work with you in determining the scope and return from virtualisation. In addition, our analytical review provides high-level target virtual infrastructure design that can be used to jumpstart your project design phase.

The paper will include:

- Assessment of the current Wintel and Linux estate for virtualisation applicability.
- Assessment and documentation of the financial and business returns from virtualization.
- Assessment of the use of the SAN with respect to virtualization and recommendations on its use.
- Proposal of a high level target environment.

TAS has a breadth of virtualisation TCO documentation for you to base your business case. Go to our website for a sample table of contents of a report and to try our TCO calculator

What options are available?

Performance snapshot

Virtualisation review and TCO analysis based on performance snapshot (1-2 days performance data per machine)

Performance Analysis

Virtualisation review and TCO analysis based on performance analysis (14 - 30 days performance data per machine)

For each of the above options you can:

- 1) Pick a representative subset and analyse that subset for suitability and utilisation.
- 2) Analyse the entire server estate for suitability and utilisation.

For more information on other VMware related services offered by TAS and a sample health check report please visit our website at www.techarchsolutions.com and select VMware scope / TCO analysis from VMware services under the services menu.

How to Request a TCO Analysis?

Simply contact TAS via any of the contact methods below and one of our consultants will contact you to arrange your scope / TCO analysis.
